XENTRIS EXCLUSIVE ON YORS PROGRAM

Addison, IL, June 25, 2007... Xentris today announced the exclusive launch of their Yors line of carrying solutions for wireless phones and MP3 players. These unique products are a culmination of a year of research on trends and needs in wireless accessories market. Products were developed in partnership with Sea Link International. The company cited the overwhelming consumer need for personalized, unique carrying solutions in the market as the reason for the design and launch of the product line.

The collection features stunning colors and patterns combined with innovative materials; and includes fifty different designs. The Yors product line is broken into four distinctive categories: fashion, outdoor, executive, and casual. These unique products feature old world craftsmanship and attachment devices that complement the designs with a touch of fine jewelry.

"We are very excited about this new, unique line of products. It represents our commitment to providing cutting edge, fashion forward designs to our customers. We look forward to continuously updating this line of product using our knowledge of the industry and our relationships with design development and trend mapping partners," said Bill Christy, CEO and President of Xentris.

More information regarding the product line can be found on the company's website at www.xentrisllc.com or visit the Yors website at www.yors.net.

About Xentris

Xentris, a privately held company, is the foremost supplier of wireless accessories and solutions to leading organizations throughout the world. Their product line includes everything from the newest cutting edge Bluetooth product to fashion and personalization products.
